

## Classroom Adaptation for Students with Deafblindness

- Provide orientation to the students with deafblindness about classroom and other places like library, toilet etc. So that they can know the location.
- Organize all the materials of the classroom in specific space. Introduce each furniture and space to them so that they can find everything easily.
- Ensure enough lighting in the classroom and keep free from background and visual noise.
- Make sure the students with deafblindness sit in the front seat/row. It will be easy for the teacher to interact with them. Teacher will speak with a bit high tone and write on the blackboard in large text.
- Use teaching learning materials and model objects to give them an idea.
- Know the student's preferred mode of communication (Sign language, verbal and tactile language) and communicate with them in that way.
- Show other students how they can support their classmates with deafblindness.
- Organize regular meeting with their parents about the progress of their children.
